Top Skills

Heygen AI
Playwright MCP
Manus AI

Certifications

Lean Six Sigma Foundations
Java 11+ Essential Training
Advanced Java Programming
Java: Testing with JUnit
Java: Data Structures

Honors-Awards

Cum Laude
DOST Scholarship
Rank 10 in 6th TOPCIT (National)
PhilNITS FE Passer
1st Runner Up in IT Olympics in
Java Category

Monching Desierto

Full Stack Software Developer | TOPCIT Ranker | PhilNITS FE
Passer | Java EE/Spring | React/Vue | AI Enthusiast
Cebu, Central Visayas, Philippines

Summary

Full Stack Software Developer with 4 years of experience specializing in high-performance Java backend systems and modern frontend technologies. I excel at architecting and optimizing both new and legacy codebases, with a proven track record in delivering significant performance improvements through algorithm optimization and refactoring. My expertise spans the entire stack, encompassing Java/Jakarta EE, Spring, and relational databases on the backend, complemented by strong frontend skills in React, Vue, and JavaScript ES6. I am driven by solving complex mathematical, computational, and logical challenges. Additionally, I actively leverage AI coding tools and agents in my hobby projects (e.g., Gemini, Claude, Cursor, Windsurf, Trae, Kiro, Lovable) to accelerate development, enhance problem-solving, and foster a more efficient, AI-powered development workflow.

Experience

Ease Solutions

4 years 1 month

Software Developer

March 2024 - Present (2 years 4 months)

Cebu

- Developed and maintained features for easeRequirements Jira Plugin (formerly R4J), both Data Center and Cloud, utilizing Java 8 & 17, Java/Jakarta EE, Spring, React, Vue, jQuery, and Atlassian SDK and Forge.
- Consistently recognized as a top-performing developer in yearly evaluations. Started as Junior Software Developer and promoted to Mid-Level on first yearly evaluation.
- Spearheaded migration of legacy tree structure, achieving 70-80% performance improvement on APIs in both filtered and unfiltered tress.
- Optimized filtered tree loading time by 20% through backend enhancement before migration.

- Owned and resolved multiple backend performance issues for a Jira Data Center Plugin.
- Successfully migrated legacy maven codebase from Java 8 to Java 17.
- Active participant in Agile (Scrum) development, including sprint planning, daily stand-ups, retrospectives, and PI Planning.
- Trusted backend developer and active member of the Backend Chapter, contributing to best practices and knowledge sharing.
- Exposed to the following tools: Git, Jira Software, BitBucket

Junior Software Developer

June 2022 - February 2024 (1 year 9 months)

Cebu, Central Visayas, Philippines

- Developed and maintained features for easeRequirements Jira Plugin (formerly R4J), utilizing Java 8, Java EE, Spring, React, Vue, jQuery, and Atlassian SDK.
- Consistently recognized as a top-performing developer in yearly evaluations. Started as Junior Software Developer and promoted to Mid-Level on first yearly evaluation.
- Optimized filtered tree loading time by 20% through backend enhancement before migration.
- Active participant in Agile (Scrum) development, including sprint planning, daily stand-ups, retrospectives, and PI Planning.
- Exposed to the following tools: Git, Jira Software, BitBucket

Catalyst Outsourcing Private Limited

Vibe Coder

November 2025 - March 2026 (5 months)

Singapore

Role: Vibe Coder

Tools: Lovable, Claude Code, Cursor, Playwright MCP, RESEND API, Manus AI, Lark, Tavus AI API, Heygen AI

lablab.ai

Agentic AI Developer (Hackathon Project)

June 2025 - June 2025 (1 month)

Vibe coded a full web app project, together with 5 international members, using Trae AI IDE and used Novita AI API. The following are also my notable experiences:

- Led the implementation on how to vibe code using the AI IDE and how to use different LLM models.

- Implemented the standard of vite coding e.g. git branching, ai assisted requirements planning, phase-by-phase implementation, bug fixing, and collaborative phase merging through pull requests, testing, and high level code reviews.
- Implemented the entire frontend and utilization of Novita AI API.
- Demonstrated the frontend features and development.

Southern Taiwan University of Science and Technology

Intern AI Researcher

April 2021 - June 2021 (3 months)

Taiwan

Made and publish a research paper about monocular image object-depth estimation on a mobile phone.

Education

Cebu Institute of Technology

Bachelor of Science - BS, Computer Science · (2018 - 2022)
